

Environmental Policy

Updated: AN 19.01-2022

The company's primary service is the design and supply of packaging for retail and industry.

Due to the nature of the business, the predominant environmental impact is the manufacture, transport and disposal of packaging.

Scanlux will work continuously, actively and systematically to minimize the impact on the external environment, where economically and technically possible.

Our environmental policy objectives are:

- To affect our customers' choices in the direction of more environmentally-friendly and sustainable solutions.
- To choose environmentally-conscious suppliers and partners
- To minimise emissions of greenhouse gasses in connection with transport.
- To generally minimise our consumption of greenhouse gases in our buildings and at our offices.

The company will:

- Help our customers reduce their CO2 consumption via packaging through analysis, material choice and redesign.
- Use FSC® certified paper and cardboard in our production processes.
- Use recycled plastic or bioplastic in our production of plastic.
- Want to create packaging that gets reused, can be recycled or composted.
- Ensure that the power from our buildings and offices comes from green energy.
- Sort and recycle our waste.
- Ensure that our employees know and understand our environmental policy and act in relation to it.
- Identify our environmental impact and create plans of action that are assessed every half year.
- Comply with and live up to binding obligations, including the applicable legislation and regulations under the ISO 14001 standard, FSC® obligations and own goals and action plans.
